

# SEE THE DIFFERENCE

## Your Problem

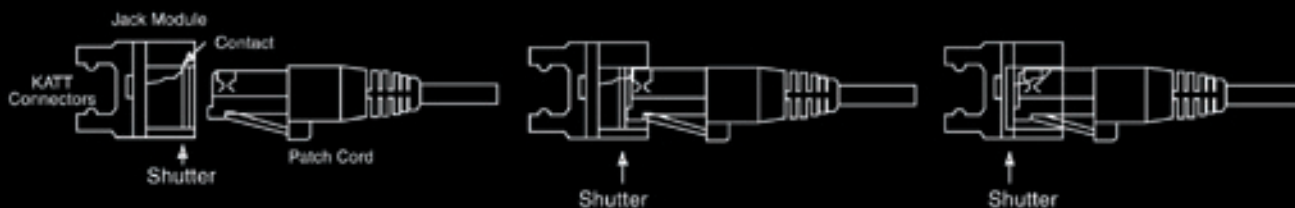

- Requires 2 hands to open shutter and insert patch lead.
- Shutter design prevents high density.
- Not aesthetically pleasing.

## Our Solution

- Only Single handed operation required.
- Compact size allows greater density.
- Multiple colour available.

As the patch cord is inserted into the jack opening, Molex Premise Networks' patented shuttered jack slides into the back wall of the jack module - out of sight.
